

CHILDREN IN FINANCIAL HARDSHIP: FLORIDA

The number of children growing up in financial hardship in Florida has been systematically undercounted. For decades, policymakers and community stakeholders have relied on the outdated Federal Poverty Level (FPL) to understand the extent of financial hardship in their communities. According to the FPL, 17% of children in Florida (730,677) lived in poverty in 2019. Yet United For ALICE data shows that another 39% (1,650,858) — more than twice as many — were also growing up in hardship, in households that earned above the FPL but not enough to afford the basics in the communities where they lived.

The reality is that just under 2.4 million children in Florida — 56% of all children — lived in a household with income below the [ALICE Threshold of Financial Survival](#) in 2019, the third-highest rate in the nation. These households included families in poverty as well as those who were **ALICE**: Asset Limited, Income Constrained, Employed. ALICE households don't earn enough to afford the essentials of housing, child care, food, transportation, health care, a smartphone plan, and taxes — the basics needed to live and work in the modern economy. There are children below the ALICE Threshold in [communities across the state](#) (PUMAs), at rates ranging from 23% in northwest Collier County to almost 90% in northeast Miami-Dade County (Hialeah City and surrounding area).

Children by Household, Florida, 2019

Number of Children in Florida = 4.2 Million

Note: This research uses the U.S. Census Bureau's American Community Survey Public Use Microdata Samples (PUMS) and focuses on children, whose ALICE status is determined by their household's income compared to local cost of living. The data does not include children who are unhoused or living in group quarters. In this brief, percentages are rounded to whole numbers for ease of reading, which may result in percentages totaling 99% or 101%. All numbers are presented in the [ALICE Children Data Dashboard](#).

Sources: ALICE Threshold, 2019; U.S. Census Bureau, American Community Survey, PUMS, 2019

KEY FINDINGS

- More than half (56%) of children in Florida lived in households experiencing financial hardship in 2019. While 17% were below the FPL, an additional 39% — more than twice as many — were ALICE.
- While there are children below the ALICE Threshold across all demographic groups, 73% of Black children and 66% of Hispanic children in Florida lived in households with income below the ALICE Threshold in 2019, compared to 42% of White children.
- Having working parents or guardians does not guarantee financial stability: 36% of Florida children in households with two adults in the labor force were still below the ALICE Threshold in 2019.
- Children below the ALICE Threshold often lack access to resources ranging from stable housing and public assistance to education and broadband services. Almost 1.5 million children below the ALICE Threshold in Florida did not participate in SNAP, and nearly 700,000 had no high-speed internet access at home in 2019.

WHO ARE ALICE CHILDREN?

Children below the ALICE Threshold are those under age 18 living in households with income below the basic cost of living for their communities. In 2019, 17% of children below the ALICE Threshold in Florida were infants (0–2 years), 12% were preschool-age (3–4 years), and 71% were school-age (5–17 years). Children in Florida’s struggling households are from all demographic groups; they include children born in the U.S. and abroad, of all abilities and races/ethnicities, living with parents or guardians who are married or single, working or not working. Children in households below the ALICE Threshold live in rural, urban, and suburban areas across the state.

Race/Ethnicity and Nativity

In 2019, the largest number of children below the ALICE Threshold in Florida were found in the largest racial/ethnic populations: Children below the Threshold were predominantly Hispanic (891,552), White (733,637), and Black (580,701). Yet Black, Hispanic, and American Indian/Alaska Native children are disproportionately represented among ALICE children — a result of [persistent discrimination and systemic barriers](#) that limit their families’ access to resources and opportunities for financial stability. In 2019, 73% of Black, 66% of Hispanic, and 53% of American Indian/Alaska Native children in Florida lived in households below the ALICE Threshold, compared to 47% of Asian children and 42% of White children.

Nativity and English-speaking ability also have an impact. Of the 251,732 children in Florida who were born outside the country (6% of children in the state), 73% were below the ALICE Threshold in 2019, compared to 55% for those born in the U.S. Rates were even higher for children living in a family with limited English-speaking ability, with 85% below the ALICE Threshold (compared to 84% nationally).

Disability Status

In 2019, there were 196,109 children with a disability in Florida — 5% of all children in the state. However, this is likely an underestimate as the number of [children being served under the Individuals with Disabilities Education Act](#) in the state is substantially higher. Children with a disability were more likely to live in households below the ALICE Threshold (64%) than those without a disability (56%). The most common disability, impacting 149,558 children age 5 and older, was a cognitive difficulty due to a physical, mental, or emotional issue — having trouble remembering, concentrating, or making decisions.

Having a household member with a disability affects everyone in the family. In 2019 there were 864,189 children in Florida living in a household where someone had a disability, and 66% were below the ALICE Threshold. When a parent or guardian had a disability, children were slightly more likely to be below the ALICE Threshold, at 68%.

Key Terms

- **ALICE: Asset Limited, Income Constrained, Employed** — households that earn above the Federal Poverty Level (FPL) but cannot afford the basic cost of living in their county. While the FPL for a family of four in 2019 was \$25,750, the average bare-minimum cost of living for a family in Florida according to the ALICE Household Survival Budget was nearly \$70,000.
- **ALICE Threshold:** Derived from the Household Survival Budget, the average income that a household needs to afford housing, child care, food, transportation, health care, and a smartphone plan, plus taxes. Calculated for various household types for every U.S. state and county.
- **Below ALICE Threshold:** Includes children in both poverty-level and ALICE households combined.

Living Arrangements

ALICE children live in all kinds of households — with married or unmarried parents, single parents, grandparents, or guardians. Children are more likely to be below the ALICE Threshold when their families have fewer adults and/or adults with lower earning potential due to systemic [racism](#) and [gender](#) and [age discrimination](#).

Most children in Florida (94%) lived with at least one of their parents (biological or adoptive) in 2019: 57% lived in a household with both parents and 37% in a household with one parent. The largest number of children below the ALICE Threshold were in married-couple households (1,180,398), followed by single-female-headed households (948,409). Other arrangements, representing smaller groups, were disproportionately ALICE: 64% of children in unmarried-couple households were below the Threshold, as were 63% of children in single-male-headed households. There were also differences in the share of households below the Threshold by [marital status and partnership type](#):

- For married-couple households, there was a lower rate of children below the ALICE Threshold among those with different-sex couples (46%), compared to same-sex couples (51%).
- For unmarried-couple households, there was a higher rate of children below the ALICE Threshold among those with different-sex couples (64%), compared to same-sex couples (58%).

In 2019, 16% of Florida's children (681,354) lived in a home with a grandparent. Children living with grandparents were as likely to be in poverty as those living without a grandparent (at 17%), but they were more likely to be ALICE (48% vs. 37%).

In addition, there were 248,798 children in Florida living in households without their parents in 2019. Six percent of these children in Florida (14,546) were in [foster care](#) (compared to 7% nationwide). But many more children who lived without their parents were in [arrangements outside of the formal system](#), including households headed by a grandparent or other relatives (175,709), or by nonrelatives (58,543).

Two out of three children (66%) living without their parents in Florida were below the ALICE Threshold, higher than the national rate (62%). The largest number of children below the Threshold living without their parents were Black. And a higher percentage of Asian, Black, and Hispanic children living without their parents were below the Threshold (at 80%, 77%, and 75%, respectively) compared to those who were White (54%).

Household Work Status

The largest driver of a child's financial stability is the employment status of household members. But having working parents or guardians does not guarantee financial stability. In 2019, most children in Florida lived in a household with at least one worker (93%). Children in a household with a single parent or guardian were more likely to be struggling: With one adult working, 76% were below the ALICE Threshold.

Children living in households with two adults were more likely to be financially stable when both adults worked. If one out of two adults was working, 64% of children were below the ALICE Threshold. But even with two adults working, 36% of children were below the Threshold.

62%

of children with an adult working as a retail salesperson — one of the most common occupations in Florida — were below the ALICE Threshold

While parents and guardians work in every industry and sector in Florida, children below the ALICE Threshold are concentrated in families where adults work in occupations with low median hourly wages. For example, in 2019, 62% of children with an adult working as a retail salesperson, earning a median wage of \$11.39 per hour, and 67% of children with adults working as customer service representatives (median wage of \$15.56 per hour), were below the Threshold. Even more striking, 81% of children with adults working as cashiers (median wage of \$10.58 per hour) were below the Threshold. Even among children with an adult working in a higher-wage job, such as a registered nurse (median wage of \$31.65 per hour), 26% were below the Threshold, as household expenses vary by household size, composition, and location.

In addition, 16% of 16- and 17-year-olds in Florida were in the labor force in 2019 (75,651). Of teens living in households with income below the ALICE Threshold 13% were in the labor force, compared to 19% of those living in households above the Threshold. While these findings may seem counterintuitive, they are in line with [research](#) that shows youth in low-income households have fewer opportunities and resources needed to work than teens from families with higher incomes.

Children by Household Financial Status and Key Demographics, Florida, 2019

Note: Percentages are rounded to whole numbers for ease of reading, which may result in percentages totaling 99% or 101%. The groups shown in this figure overlap across categories (Race/Ethnicity, Disability Status, Living Arrangements, and Workers). All racial categories except Two or More Races are for one race alone. The Hispanic group may include children of any race. "Grandparent Living With Grandchild" includes any arrangement where grandparents live with their grandchild, including where parents or other adults are present. For the Workers category, the number of workers is defined as "workers in the family over the last 12 months" from when the survey was conducted. View more on the [ALICE Children Data Dashboard](#).

Sources: ALICE Threshold, 2019; U.S. Census Bureau, American Community Survey, PUMS, 2019

WHAT RESOURCES DO ALICE CHILDREN LACK?

Many ALICE families earn too much to be eligible for public assistance but still struggle to meet basic needs for their children. ALICE households are much more likely to lack stable housing, quality child care/early education, private health insurance, and home internet access, yet they still don't qualify for many public assistance programs. When these necessities are at risk, there are both [short- and long-term consequences](#) for children below the ALICE Threshold.

Stable Housing

Housing instability has a profound impact on a family and child's overall well-being. Children in families without stable housing face greater risks for [poor physical health](#), [increased family stress](#), [social isolation](#), and [lower academic performance](#). Children living in rented housing units and cost-burdened households are more likely to go through the stress of moving – and ALICE children and children in poverty are more likely to live in both of these types of housing.

Among children below the ALICE Threshold in Florida in 2019, 57% were in families who rented and 43% were in families who owned their home (vs. 23% and 77%, respectively, for households above the Threshold). There were also gaps in homeownership by race and ethnicity both above and below the Threshold. Below the Threshold, families of Black children had the lowest homeownership rate (33%), while families of Asian children had the highest rate (68%). Above the Threshold, the homeownership rate for families of Black children was higher (65%), but still substantially lower than for families of Asian and White children (both 83%).

61%

*of children in renter households
below the ALICE Threshold in Florida
were rent burdened*

Because housing is one of the most expensive items in the Household Survival Budget, it is not surprising that 61% of children in renter households below the ALICE Threshold paid more than 35% of household income on rent (compared to 4% of children in renter households above the Threshold).

The highest rates of children below the Threshold living in rent burdened households – at more than 90% – were in eastern Sarasota County and northern St. Johns County.

For all children – regardless of whether their family rented or owned – the longer they lived at their place of residence, the more likely they were to have higher income. Both above and below the ALICE Threshold, children in renter households were more likely to have moved in the past year, compared to those in owner households (28% vs. 10%).

Education

Quality early-childhood programs have proven to be critical to [healthy child development](#), and to acquiring foundational skills required for a [successful transition to school](#) and [future academic achievement](#). Of all preschool-age children in Florida, 53% were enrolled in preschool in 2019, higher than the national average (49%). Preschool enrollment rates also differed by household financial status: 47% of preschool-age children below the ALICE Threshold in Florida were enrolled in preschool in 2019, compared to 62% of their peers above the Threshold. A smaller difference was seen in kindergarten enrollment (91% for children below the Threshold vs. 94% for those above).

[Being a high school graduate prepares teens for future academic and career success](#). Yet in 2019, 12,477 Florida children aged 15–17 were not in school. More than two-thirds of these teens (70%) lived in households with income below the ALICE Threshold.

Health Insurance

Access to health insurance is critical to both [wellness](#) and [financial stability](#) for families below the ALICE Threshold and [especially children](#). While most children in Florida had health insurance in 2019 (93%, slightly lower than the national rate of 95%), 9% of children below the ALICE Threshold did not have coverage. Children in families with income below the Threshold were also more likely to have public insurance (58%), while those above the Threshold were far more likely to have private insurance (81%).

Children: Florida	Below ALICE Threshold	Above ALICE Threshold
No Insurance	9% (205,484)	5% (98,096)
Public Insurance	58% (1,375,733)	14% (258,752)
Private Insurance	34% (800,318)	81% (1,481,558)

Home Internet

The availability of internet access and devices for education has become increasingly essential for young people, yet the [digital divide](#) by income and race/ethnicity persists. In Florida, 94% of children overall had home internet access in 2019, similar to the national rate (95%). However, children below the ALICE Threshold were less likely to have home internet access than those above the Threshold (91% vs. 98%) and considerably less likely to have high-speed internet, which is essential for work and online learning (71% vs. 89%).

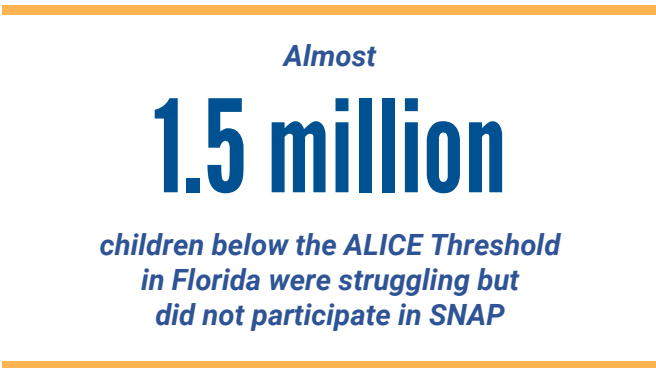

There were also differences in access by race/ethnicity, especially for high-speed internet: 36% and 32%, respectively, of Black and American Indian/Alaska Native children in households below the ALICE

Threshold did not have high-speed internet access, compared to 23% of White children and 17% of Asian children in households below the Threshold.

By location, access also varied. The percentage of children below the ALICE Threshold without high-speed internet access was highest in northeast Volusia County (Daytona Beach, Ormond Beach, and Holly Hill) at 66%.

Public Assistance

For a [variety of reasons](#), public assistance does not reach all children in households that are struggling. While most children in poverty are eligible, ALICE children live in households that often earn too much to qualify for assistance. For example, the income eligibility threshold in Florida for one of the most far-reaching public assistance programs, the [Supplemental Nutrition Assistance Program](#) (SNAP, formerly food stamps), is [200%](#) of the FPL. Even though all children in poverty should be covered by SNAP, in Florida the program was utilized by 61% of children in poverty (445,460) and a mere 28% of children in ALICE households (459,920) in 2019. This left a gap of nearly 1.5 million children whose families were struggling to make ends meet but not participating in SNAP.

SNAP coverage of children below the ALICE Threshold varied greatly among states, from 19% in Utah to 53% in West Virginia. At 38%, Florida was in the top half of states.

There were also differences by race/ethnicity. In 2019, 51% of Black children and 38% of Hispanic children below the ALICE Threshold in Florida participated in SNAP, compared to 30% of White children below the Threshold.

HOW HAVE ALICE CHILDREN FARED DURING THE PANDEMIC?

How a child starts in life impacts their long-term health, wellness, education, and career. Family financial stability is one of the strongest [predictors of current and future well-being](#). Financial instability not only contributes to current experiences of [stress, trauma and hardship](#), but it impedes a child's opportunity for [future success](#), including higher education, a higher income, and long-term asset building.

Even before the COVID-19 pandemic, children below the ALICE Threshold experienced the ripple effect of challenges related to their parents' work status, lack of income/savings, and family responsibilities. As shown in our recent report, [The Pandemic Divide](#), households below the Threshold suffered disproportionately during the pandemic, with vulnerabilities caused by longstanding racial inequities ensuring that Black and Hispanic households experienced the greatest hardship.

Expanding on *The Pandemic Divide*, our analysis of the U.S. Census Bureau's most recent [Household Pulse Surveys](#) (July–October 2021) reveals that **children and households below the ALICE Threshold bear the brunt of the pandemic's physical and emotional toll:**

- **Financial uncertainties:** Because households below the ALICE Threshold with children continue to suffer from loss of employment income and are unable to save, they remain far less confident in their ability to make their next rent or mortgage payment on time. In Florida, almost four in ten families below the Threshold with children (39%) were slightly confident, not at all confident, or had deferred their payment, compared to 9% of those above the Threshold.
- **Food insufficiency:** Throughout the pandemic, families below the ALICE Threshold with children consistently struggled to afford food. As recently as the fall of 2021, 40% of Florida families below the Threshold with children reported that sometimes or often "children were not eating enough because we just couldn't afford enough food." While this was less common in higher-income households, a substantial 22% of respondents above the Threshold also struggled to afford food for their children. Public assistance filled in only part of the gap. In the fall of 2021, almost half (47%) of students below the ALICE Threshold picked up or ate a free meal at school, received an EBT card to help buy groceries, or had free meals delivered, which means that just over half (53%) did not.

- **Interrupted learning:** The pandemic has disrupted student learning for two years, and children in households below the ALICE Threshold have been disproportionately affected. The most immediate way to compensate for disrupted K–12 schooling is to attend summer academic programs. In the summer of 2021, children below the Threshold were more likely to have attended such programs (23% vs. 15% above the Threshold), reinforcing the research that shows [children from low-income households are more likely to have experienced a loss of learning](#). Higher education was also impacted as many students [changed their plans to attend college](#), and those below the Threshold were more likely than those above to cancel plans to take classes (17% vs. 12%).
- **Delayed or missed health care:** Children below the ALICE Threshold were less likely to have had preventive health care; in the fall of 2021, 41% of Florida households below the Threshold with children had to miss, delay, or skip their child's preventive check-up in the last 12 months, compared to 26% of those above the Threshold. Forgoing or postponing care caused some children to go without routine vaccinations, screenings, and ongoing care for chronic health conditions.
- **The Child Tax Credit:** Forty percent of Florida households below the ALICE Threshold with children were still not receiving the advance Child Tax Credit in the fall of 2021, [for numerous reasons](#) such as a parent not having filed a recent tax return or a child not having a Social Security number. The immediate need for the additional income is evident from the ways Florida families who did receive the advance Child Tax Credit used it: Those below the ALICE Threshold were more likely to use it to pay off debt than those above the Threshold (54% vs. 31%), and they were less likely to save it (15% vs. 34%).

40%

of Florida households below the ALICE Threshold with children still had not received the advance Child Tax Credit in the fall of 2021

ALICE IN FOCUS: CHILDREN – KEY INDICATORS BY STATE, 2019

- Find your state and federal representatives and see ALICE household data by legislative district with our [ALICE Legislative District Tool](#)
- Advocate for more accurate data collection by the [U.S. Census Bureau](#) for children who have been [historically undercounted](#), including (but not limited to) young children, children of color, children with disabilities, and children in low-income households

United For ALICE is a driver of innovative research and action around financial hardship. The data and analysis are shared with United Ways, corporations, foundations, government, and nonprofits, to inform policy and promote positive change.

United For ALICE partners with [United Way of Florida](#) to bring the ALICE research to Florida.

United Way of Florida

The **ALICE in Focus Series** utilizes ALICE measures — the Household Survival Budget and the ALICE Threshold — to analyze the U.S. Census Bureau's American Community Survey (ACS) Public Use Microdata Samples (PUMS). Each "Focus" in the series highlights a different demographic group. For more details about the methodology for the ALICE in Focus Series, go to UnitedForALICE.org/Methodology.
